NEW HOLOPHANE LANTERN POST TOP LED SERIES LUMINAIRE COMBINE HISTORIC APPEARANCE WITH ENERGY EFFICIENCY AND LONG LIFE

Fixtures bring old time look, modern technology to parks, city streets

GRANVILLE, OH (4/28/11) – New Lantern Post Top LED Series luminaires from Holophane join vintage styling with energy management and sustainability for a wide range of outdoor applications. The fixtures offer prismatic optics for visual comfort and robust thermal management for exceptional life.

A unique housing design facilitates installation and maintenance. The electronic component module swings out with the access door when the unit is opened, with the module completely compartmentalized for convenient servicing. Proper thermal management optimizes LED light source output and system life for long-term service without maintenance.

New Lantern Post Top LED Series luminaires are available in several styles, making the fixtures applicable for a range of environments, including city streets, parks, residential areas, campuses, walkways and public squares. Customers may choose LED Utility Series and Traditional Series luminaires in Arlington or Jefferson styles. The Utility Series also includes the Utility Posttop LED fixture, with the Traditional Series offering the RSL-350 LED luminaire.

The new fixtures are offered in a variety of colors including black, green, dark green, brown green, white and bronze. Custom colors are available upon request.

“Post top lanterns adorned America’s urban streets and parks during the early twentieth century,” said Ben Prichard, Holophane Senior Product Manager, Outdoor. “Holophane has combined LED technology with this timeless fixture style to meet designers’ needs for appearance, energy management and sustainability.”

New Lantern Post Top LED Series luminaires are IP rated and suitable for wet locations at a maximum 40°C ambient temperature. (CSA listing pending)
